WHAT IS A VOLCANO?

A volcano is an opening in the earth's crust through which lava, volcanic ash, and gases escape. When pressure builds up, eruptions occur.

INTERESTING FACTS

**Some volcanoes
even exist
underwater.**

**When magma
reaches the
Earth's surface
it is called lava.**

**When the lava
cools, it forms
rock.**

**On the
Earth today
there are
around 560
active
volcanoes.**

To build our volcano we need:

- a) baking soda**
 - b) vinegar**
 - c) food coloring**
 - d) an empty bottle of water**
 - e) a plate**
 - f) washing-up liquid**
-

Instructions for building a homemade volcano

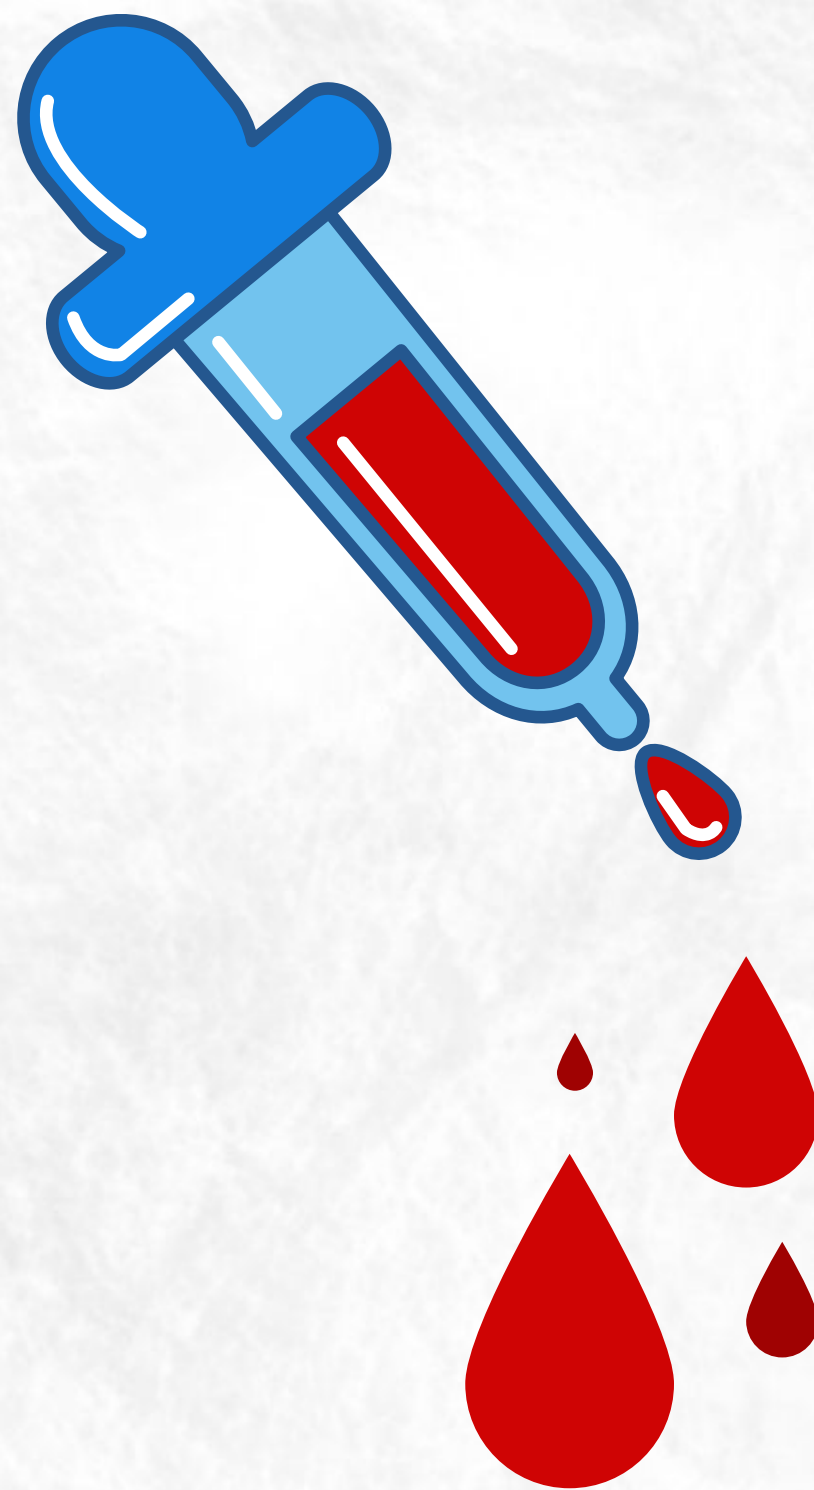

1) Cut the bottle with scissors or knife and take just the bottom part which we will use in the rest of the experiment.

2) Put a few spoons of baking soda and washing-up liquid into the bottle/volcano.

**3) Put a few
drops of food
coloring and
mix.**

**4) FINALLY,
POUR QUICKLY
SOME VINEGAR
AND ENJOY THE
ERUPTION!**
